

FibroVera is a proprietary blend of microbial and botanical components selected to support uterine and breast health. Reproductive health is an important topic for men and women alike. For women however, understanding and feeling confident about the body and the ebb and flow of the menstrual cycle is almost always a daily concern. FibroVera is a gentle option that offers the opportunity to regain balance in women's hormone levels as well as relief from chronic pain, bleeding and discomfort.

FOR A LIFETIME OF UTERINE AND BREAST HEALTH

FibroVera is an all-natural unique blend of hormone balancing botanicals and enzymes designed to help women suffering from reproductive health concerns stemming from hormonal irregularities. FibroVera provides fibrinolytic (fibrin eating) enzymes and cofactors that are specifically selected to promote normal fibrin activity. Healthy hormone levels will naturally promote normal fibrin activity as well as help to decrease the symptoms of PMS. FibroVera is intended to modulate the hormonal response, restoring inherent processes in a woman's body. Each component was carefully selected using only well researched and clinically supported ingredients.

In many women, simply restoring hormonal balance through diet and environmental changes is possible and can reverse the effects of fibrosis. However, in some cases fibrosis remains strong pre- and post-menopause. Hormonal imbalances are the result of many factors: diet, stress, genetics, environment, etc. FibroVera removes any and all guesswork from the complex task of realigning the body's hormones. Each capsule provides the perfect balance of hormone stabilizing ingredients in combination with fibrinolytic enzymes and liver cleansing support.

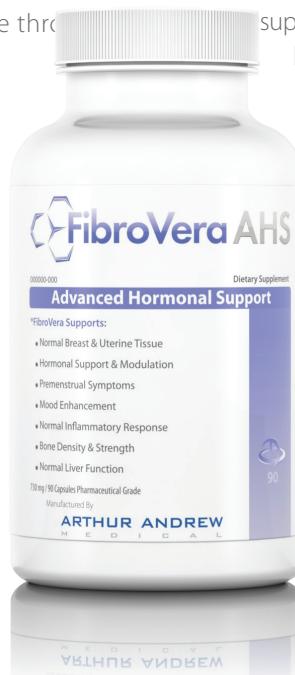

Fibrin, the key building block of tissue repair, is created by the myometrium (uterine muscle) in response to normal cycling, pregnancy and rare challenges such as miscarriage. When female reproductive tissues are exposed to excessive

amounts of estrogen, this repair cycle can run continuously with little to no interruption. As more and more fibrin deposits, it binds with the uterine and/or breast tissue and proceeds to form fibroids and fibrocystic breasts. Given proper support, a woman's body can not only control, but also reverse the excess secretion of fibrin that can begin to manifest itself as arterial plaque, fibrous breasts, endometriosis and even fibroid tumors.

DEVELOPING A SOLUTION

Excessive estrogen, known as estrogen dominance, is not only responsible for reproductive health concerns, but can also lead to unpleasant symptoms such as lowered energy, decreased libido and even weight gain. Many women have been lead to believe

supplementing with estrogen is the answer to many common hormonal challenges; however, this couldn't be farther from the truth. FibroVera was formulated to work as an integral part of a balanced food and supplement regimen meant to target those symptoms associated with hormonal imbalances. In the short term, usually within a few weeks, women can expect to feel and function better.

Typically, anywhere from 2-6 capsules of FibroVera per day is effective for most women, depending on how serious the condition is and/or how aggressively they would like to alleviate their symptoms. Some women may experience symptoms similar to PMS when beginning a regimen of FibroVera. In these cases, decreasing the dosage to one capsule per day or one capsule every other day is recommended until the body resumes proper hormonal balance and function.

FIBROVERA AHS FAQS

Is FibroVera right for all women?

FibroVera was designed with every woman in mind. FibroVera does not directly impact hormones, yet provides the key ingredients that metabolize unwanted hormone metabolites while promoting the secretion and balance of beneficial ones. FibroVera's ingredients are all natural components that work to replenish missing factors from diet, restoring the inherent processes in any woman's body.

Will FibroVera help me when I become menopausal?

The FibroVera formula was specifically formulated to help support many of the symptomatic challenges experienced by women in hormonal transitions. We believe that women experiencing difficulty associated with menopause will note substantial improvement with the consistent use of FibroVera.

Can I take FibroVera if I am trying to conceive?

FibroVera does not contain any ingredients that will negatively impact conception. However, if you become pregnant while taking FibroVera, or are nursing presently, discontinue use and ask your health care provider for advice on how to proceed.

Can I take FibroVera with other supplements?

FibroVera may be safely taken with Neprinol and other dietary supplements. Neprinol can increase the fibrinolytic (fibrin lysing) portion of FibroVera. Syntol can replenish beneficial flora in the body, and Devacor may reduce gastrointestinal stress induced by the process of digesting foods low in natural enzymes.

If I am anemic, can I safely take FibroVera?

Excessive blood loss can occur during menstruation. For many forms of anemia, we recommend your healthcare provider consider a heme-iron preparation, a B12 supplement, and folic acid with additional multi-B support to address this situation. If you believe that you are or may be anemic, please consult with your health care provider.

Supplement Facts

Serving Size: 1 Capsule

Servings Per Container: 90

Amount Per Serving	% Daily Value
Proprietary Blend FibroVera AHS 730 mg	†
Fibrinolytic Enzyme Blend: Serrapeptase, Protease, Bromelain, Papain, Nattokinase NSK®	
Cofactor Blend: Calcium Caprylate, Magnesium Ammoniate	
Estromin® Hormonal Support Blend: P5P (Pyridoxal-5-Phosphate), GLA (Gamma-Linolenic Acid), DIM (Diindolylmethane), 5 HTP, DHEA (Dehydroepiandrosterone), Dong Quai Root (<i>Angelica Sinesis</i>)	
Liver Cleanse: Milk Thistle Seed, Dandelion Root, Hyssop Flowers	

Percent Daily Values based on a 2,000 calorie diet
† Daily Value Not Established
