

Devigest is more powerful and concentrated than its earlier predecessors. Just one capsule with meals can ease the digestion of even the most troublesome of foods. Now more powerful and concentrated, Devigest can support severe dairy and gluten intolerances as well as reduce instances of occasional gas and bloating. Devigest now contains a highly potent Dipeptidyl Peptidase with 500 units of DPP-IV activity per serving. This Peptidase breaks down gluten, casein and lactose, three known digestive irritants. Many formulas today have begun to utilize this amazing enzyme, but rarely is it incorporated in a broad spectrum blend, which leaves many formulas incomplete.

Devigest is a revolutionary new ultra concentrated formula in rapid release vcaps. Each capsule delivers clinical strength enzymes that begin dispersion almost instantly. Rapid release ensures quick relief from uncomfortable indigestion symptoms in the upper GI tract. Devigest also includes Alpha Galactosidase which is the active ingredient in the ever-popular product Beano®. Our bodies lack the enzymes that are responsible for breaking down certain carbohydrates in the small intestine. This causes improperly digested food to enter the large intestine where bacteria then begin to break it down, creating large amounts of gas which can lead to flatulence, abdominal bloating and digestive discomfort. Unlike many other anti-gas medicines, Alpha Galactosidase can help prevent gas before it starts by breaking down complex carbohydrates found in gassy foods into simpler, more easily digestible sugars.

A similar phenomenon occurs with those that experience digestive distress when consuming dairy foods. Lactose intolerance is the inability to break down milk sugars known as lactose found in all dairy products. Lactose intolerance is the result of lacking the essential enzyme Lactase.

Devigest now contains 444% more lactase than its predecessor per serving so those with lactose intolerance can enjoy dairy foods without experiencing digestive distress.

Indigestion, heartburn and acid reflux are often blamed on the overproduction of acid.

More commonly low acid production causes undigested foods to rise up and burn the sensitive tissues of the esophageal sphincter. Supplementing with a high-quality digestive enzyme like Devigest may be the answer to many of these concerns. Properly digested foods add nutrients to our bodies, provide energy, as well as stimulate stomach acid, serotonin, and other hormones that are vital for proper human function.

ARE YOU LACTOSE INTOLERANT?

It is important to note that lactose intolerance is different than a dairy allergy. Lactose intolerance is the inability to metabolize milk sugar known as lactose. This occurs due to a lack of lactase in the digestive system. Studies have shown that the majority of adults experience a decrease in lactase activity as they age. When the body is deficient in lactase, the lactose passes directly into the colon intact, allowing for fermentation to occur, which produces gases, causing abdominal symptoms such as bloating, gas, cramps and diarrhea. Devigest contains a highly potent lactase enzyme to assist the body with digesting foods high in lactose. When taking lactose-digesting enzymes like those in Devigest, you should take them with the first bite of the dairy product for maximum efficacy.

GLUTEN INTOLERANCE

Celiac disease, or gluten sensitive enteropathy, is a common, chronic disease that is now thought to affect 1 in every 133 people in the U.S. alone.

People who suffer from celiac disease are unable to eat foods containing gluten, which is a certain protein that is found in the grains of rye and wheat. In those who have celiac disease, gluten triggers an autoimmune reaction that leads to the destruction of the villi in the small intestine. When this autoimmune response occurs, people with celiac disease produce antibodies that attack the intestine, which causes illness and damage.

Symptoms of celiac disease include diarrhea or constipation, abdominal pain, weight loss, malabsorption, chronic fatigue, etc. These symptoms mimic those of people who are allergic or sensitive to gluten; however, unlike a simple sensitivity, celiac disease can be life threatening if left untreated. For those who have sensitivity to gluten, supplementing with a product such as Devigest may help curb symptoms and allow one to once again enjoy all of the foods that they have grown to love.

There are no pharmaceutical drugs to treat celiac, and there is no cure. Those who suffer from celiac disease must completely eliminate gluten from their diet to avoid irreparable intestinal damage. In addition to eliminating gluten, many people are also supplementing with high quality probiotic supplements such as Syntol.

Research is currently underway to find whether probiotics may help to alleviate the severity of celiac disease, and even inhibit damage to the intestinal tract when gluten is inadvertently consumed. Probiotics can help to heal damage caused by chronic inflammation as well as aid the digestive system in properly absorbing nutrients that are normally lost due to celiac disease. Many people that suffer from celiac disease remain symptomatic after eliminating gluten from their diet; a probiotic such as Syntol may help aid in reducing these symptoms.

Supplement Facts

Serving Size: 2 Capsules

	Amount Per Serving	% Daily Value
Calcium Carbonate	60 mg	†
Potassium Bicarbonate	50 mg	†
Devigest Proprietary Blend: Peptidase DPP-IV, Amylase, Glucoamylase, AlphaGalactosidase, Lactase, Bromelain, Acid Stable Protease, Cellulase, Xylanase, Lipase, Hemicellulase, Papain, B. subtilis	638 mg	†
Devigest Protease Blend: (pH Stable Proteases derived from <i>A. oryzae</i> and <i>B. licheniformis</i>)	52 mg	†

† Daily Value Not Established

Other Ingredients: Cellulose (capsules)

Devigest is free of dairy, gluten, and soy allergens. Contains no artificial colors or preservatives.

KEEP OUT OF REACH OF CHILDREN. STORE IN A COOL, DRY PLACE WITH LID TIGHTLY CLOSED

WARNING: DO NOT TAKE THIS PRODUCT WITHOUT THE CONSENT OF YOUR PHYSICIAN IF YOU ARE CURRENTLY TAKING ANTI-COAGULANTS OR IF YOU ARE PREGNANT OR NURSING.

DEVIGEST SUPPORTS

- Optimal Nutrient Absorption
- Complete Food Assimilation
- Alkalinization of the Gastrointestinal Tract
- Reduced Occasional Gas / Bloating
- Decreased Gastrointestinal Waste
- Reduced Food Irritations and Sensitivities
- Circulatory Health
